

Picnic Table 1800 High

by +Halle

The total estimated climate emission

1124 kg CO2-e

	Potential impact of missing data		
Best case:	760	Kg CO2-e	-42%
Worst case:	2330	Kg CO2-e	78%

17/11/2025

DISCLAIMER

Standard for calculation

This climate footprint report is calculated according to EUs rules for Product Environmental Footprint (PEF). When data was not available from the brand-owner, conservative estimates has been applied. All phases of the product lifecycle are included in the calculation. For the phases after factory-gate; Use Phase and Disposal conservative estimates are applied, build from the PEF rules. Specifically, the Disposal part is calculated based on an EU average. Målbar only report on Climate Impact.

The data sources behind these calculations are: **EcoInvent 3.8** and **EF 3.0 PEF** data as well as **PEF compliant LCA data**. (read more here: www.maalbar.dk/transparency/)

Method of data application

This report is generated by using MÅLBAR's Climate Screening Tool with the brand-owner firstly performing a self-assessment afterwards going through the VERIFICATION Process in Målbar. (Read more here: www.maalbar.dk/verification/)

Communication of results

The results in this report, is not intended for communication towards the private consumer but only for Professional customers.

Responsibility of data

It is the sole responsibility of the Brand Owner concerning all Input data (including: Material weights, Packaging weight and dimensions, Origins of production, origins of material, Transport information and Warehouse and Retail information). With the verification of this report, Målbar has manually controlled these data towards the normal-field of data for this product type and questioned the Brand Owner for outliers before completing this report.

Validity of report

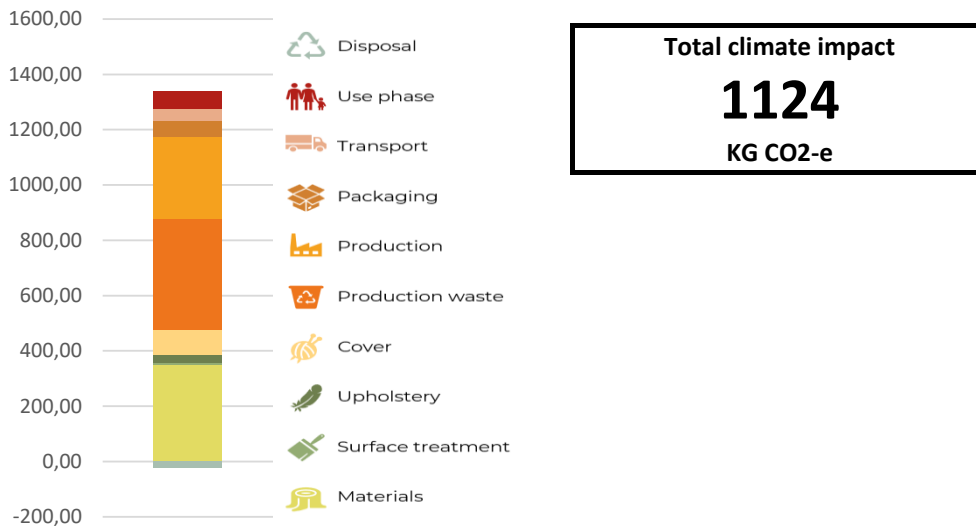

The results of this report is valid for 1 year from the verification date.

Climate emissions of final product

The complete LCA-screening (cradle-to-grave) of your product can be seen below. The total emissions with a range reflecting the uncertainty of data, based on inputs. All life-cycle-stages have been presented individually and their contribution can be seen in the column. Furthermore, a comparison of relatable goods or activates have been presented correlating with the total climate emission of the product.

Material group emissions*

Presented below are the different material groups in the product and their estimated contribution. Included are all upstream transportation and processes on the materials along with production, production waste and waste scenarios, in order to better understand which material group contributes the most in the product.

Group	Total impact
Solid Wood	0,00 kg CO2eq 0%
Wood based board	209,52 kg CO2eq 19%
Metal	620,09 kg CO2eq 56%
Plastic	0,55 kg CO2eq 0%
Glass / Stone / Ceramics	0,00 kg CO2eq 0%
Surface finish & chemicals	29,63 kg CO2eq 3%
Upholstery	39,78 kg CO2eq 4%
Cover	93,24 kg CO2eq 8%
Electronic components	0,00 kg CO2eq 0%
Packaging	65,91 kg CO2eq 6%
Transport & logistics	42,77 kg CO2eq 4%

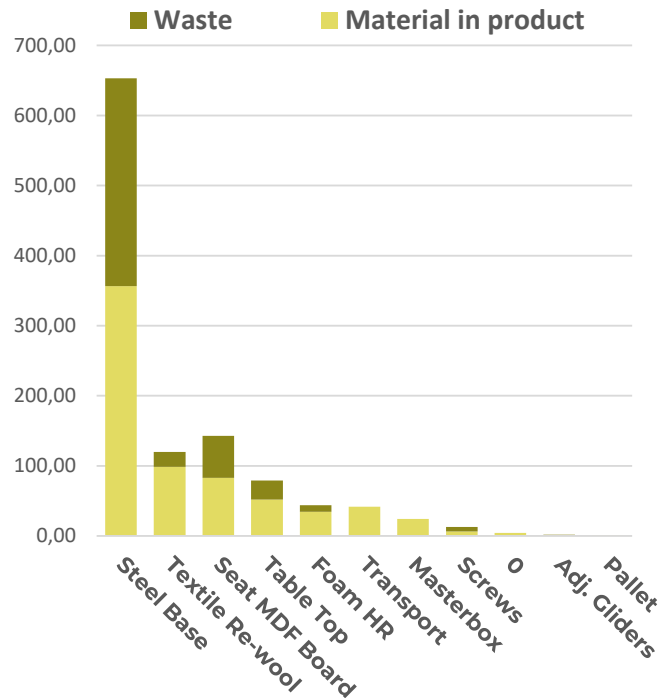

**) The values presented here, is total emission pr material group (incl. material, production, material-transport and waste,)*

Specific material element emissions*

Below is an overview of the emission of the most emitting elements in the product. Each element is visually divided between the emission from the amount of material in the product and it's associated waste-emission. Included are the material and production waste with production processes, transportation and disposal scenarios. This gives an overview of each specific material versus waste.

Element	Total impact
Steel Base	653,17 kg CO2eq
Textile Re-wool	120,01 kg CO2eq
Seat MDF Board	142,97 kg CO2eq
Table Top	79,00 kg CO2eq
Foam HR	43,81 kg CO2eq
Transport	41,51 kg CO2eq
Masterbox	24,08 kg CO2eq
Screws	12,86 kg CO2eq
0	4,15 kg CO2eq
Adj. Gliders	1,51 kg CO2eq
Pallet	0,84 kg CO2eq

*) The values presented here, is total emission pr element (incl. Material, production, transport, Waste)

Transport emissions of final product*

Product transportation can be seen below, divided into the different transport legs, correlating with the route of the final product.

Element	Total impact
Supplier - Customer	41,51 kg CO2eq
PEF default transport*	0,00 kg CO2eq

DATA QUALIFICATION

This LCA-screening is based on user-input data from the brand owner, along with average data in conformity with PEF. Where no user-input have been applied, conservative assumptions have been created.

Assumptions may include:

- Origin of Materials
- Origin of component production
- Additional material information (e.g. for textiles: D-tex values and treatment processes)
- Any Recycled or certified Sustainable content in each material is only included when sufficient documentation has been provided.
- Production waste amounts and handling of such.
- Transportation types and distances
- Waste handling of the product at end-of-life (EU average data)

It is possible for the Brand-owner to apply company specific data on a material or component-production by "onboarding" each individual production site into the system. This is referred to as primary process data and can cover a certain percentage of the total production-stage and part of the material-stage.

For this specific product:

0 % primary process data have been applied

100 % average process data have been applied
